Vienna/London, October 2015

Dear Colleagues!

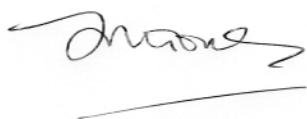

It is a great pleasure for us to announce the 3<sup>rd</sup> "International Symposium on Parasite Infections in Poultry", a continuation of successful meetings we organized in Vienna in 2007 and 2012.

Progress in science and transfer of knowledge towards practical application relies heavily on exchange of information between people working and interested in the same research areas. The intention of this symposium is provide a focus for colleagues wanting to look at, and engage with, the bigger scientific pictures. This has been the main motivation for us in organizing the next meeting thus we proposed to extend its scope from protozoa to all parasites.

Changes in legislation and husbandry continue to have a high impact on the incidence and severity of parasite infections in poultry. *Eimeria* species, *Histomonas meleagridis* and *Dermanyssus gallinae* provide an obvious focus of attention. In addition, other less well known parasites will also be considered by our symposium.

The overall purpose of the symposium is to provide a timely focus on the biology, diagnosis, treatment and prophylaxis of parasite infections in poultry during a time of great scientific and technical innovation.

Please find the necessary information and registration forms on our homepage (<http://www.vetmeduni.ac.at/International-Symposium-Parasite-Infections-Poultry-2016/>). We are looking forward to welcome you in Vienna on 1<sup>st</sup>-2<sup>nd</sup> July 2016.
